

Abstract of the Disclosure

An authorization service for a gaming network including gaming machines provides systems and methods for authorizing access requests to resources on the gaming network by service providers and other entities on the gaming network. The gaming services framework
5 comprises a set of services, protocols, XML schemas, and methods for providing gaming system functionality in a distributed, network based architecture that includes gaming machines and servers. The systems and methods provide a service-oriented framework for gaming and property management based upon internetworking technology and web services concepts.
